Fact sheet as of 6/12/2025

BACKGROUND

Goods movement is essential to Orange County's economy and quality of life. Every day, trucks travel across the county's highways, railways, and major roads to connect businesses, industrial areas, and distribution centers with regional and national markets. Orange County is a key connector supporting last-mile deliveries, serving regional distribution centers, and linking to major regional and interstate corridors. As freight activity continues to evolve, Orange County will face new challenges related to congestion, safety, land use, and other community impacts.

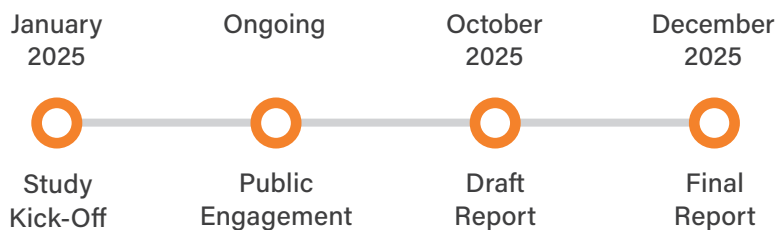

OVERVIEW

The Orange County Goods Movement Vision Study (Study) is a strategic planning effort led by the Orange County Transportation Authority (OCTA) to evaluate current goods movement conditions, identify key issues and opportunities, and develop a long-term vision for more efficient, sustainable, and reliable freight movement throughout the county. The Study will support future planning efforts, including OCTA's 2026 Long Range Transportation Plan, and serve as a resource to address goods movement-related challenges in Orange County.

Building on OCTA's 2017 Goods Movement Study, this effort will:

- Evaluate existing freight corridors and operations
- Identify current and future goods movement needs based on economic growth and land use trends
- Highlight challenges related to congestion, safety, and environmental impacts
- Develop strategies to improve the efficiency and sustainability of freight movement
- Coordinate with regional partners, local jurisdictions, and industry stakeholders
